

AURONEX

Productive Gold Finance

March 2026

# The Investor Pitch

“Auronex is a productive gold-finance system. We take gold-linked capital, deploy it into yield-generating strategies, distribute value through a structured network, and anchor the system to physical gold redemption.”

It is not just a token. It is a full-stack financial model.

# The Flaw in Modern Wealth

Gold is valuable, but financially inefficient.

## Idle Gold.

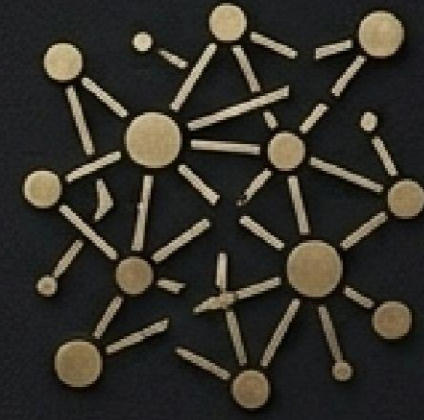

Gold is largely idle capital.  
Traditional finance does not  
unlock yield from ownership.

## Unanchored Crypto.

Crypto offers yield, but  
lacks real-asset anchoring.

## Baseless Networks.

Network-driven models  
scale, but often lack  
balance-sheet credibility.

The market lacks a system that combines real assets, yield, and scalable distribution.

# Financializing Gold

“We do not digitize gold.  
We financialize it.”

Yield-generating  
treasury assets

Incentivized  
distribution networks

Redeemable  
physical gold

Redeemable  
physical gold

# Three-Tier System Architecture

## Treasury Layer

XAUM-backed capital  
Fully deployable  
Yield-generating

## Distribution Layer

Referral-led expansion  
Rank-driven performance incentives  
DAO participation

## Redemption Layer

ANX to AUGR conversion

# Token Architecture

## Three linked instruments

Gold claim instrument.

Treasury asset.  
Gold-linked.  
Balance-sheet input.

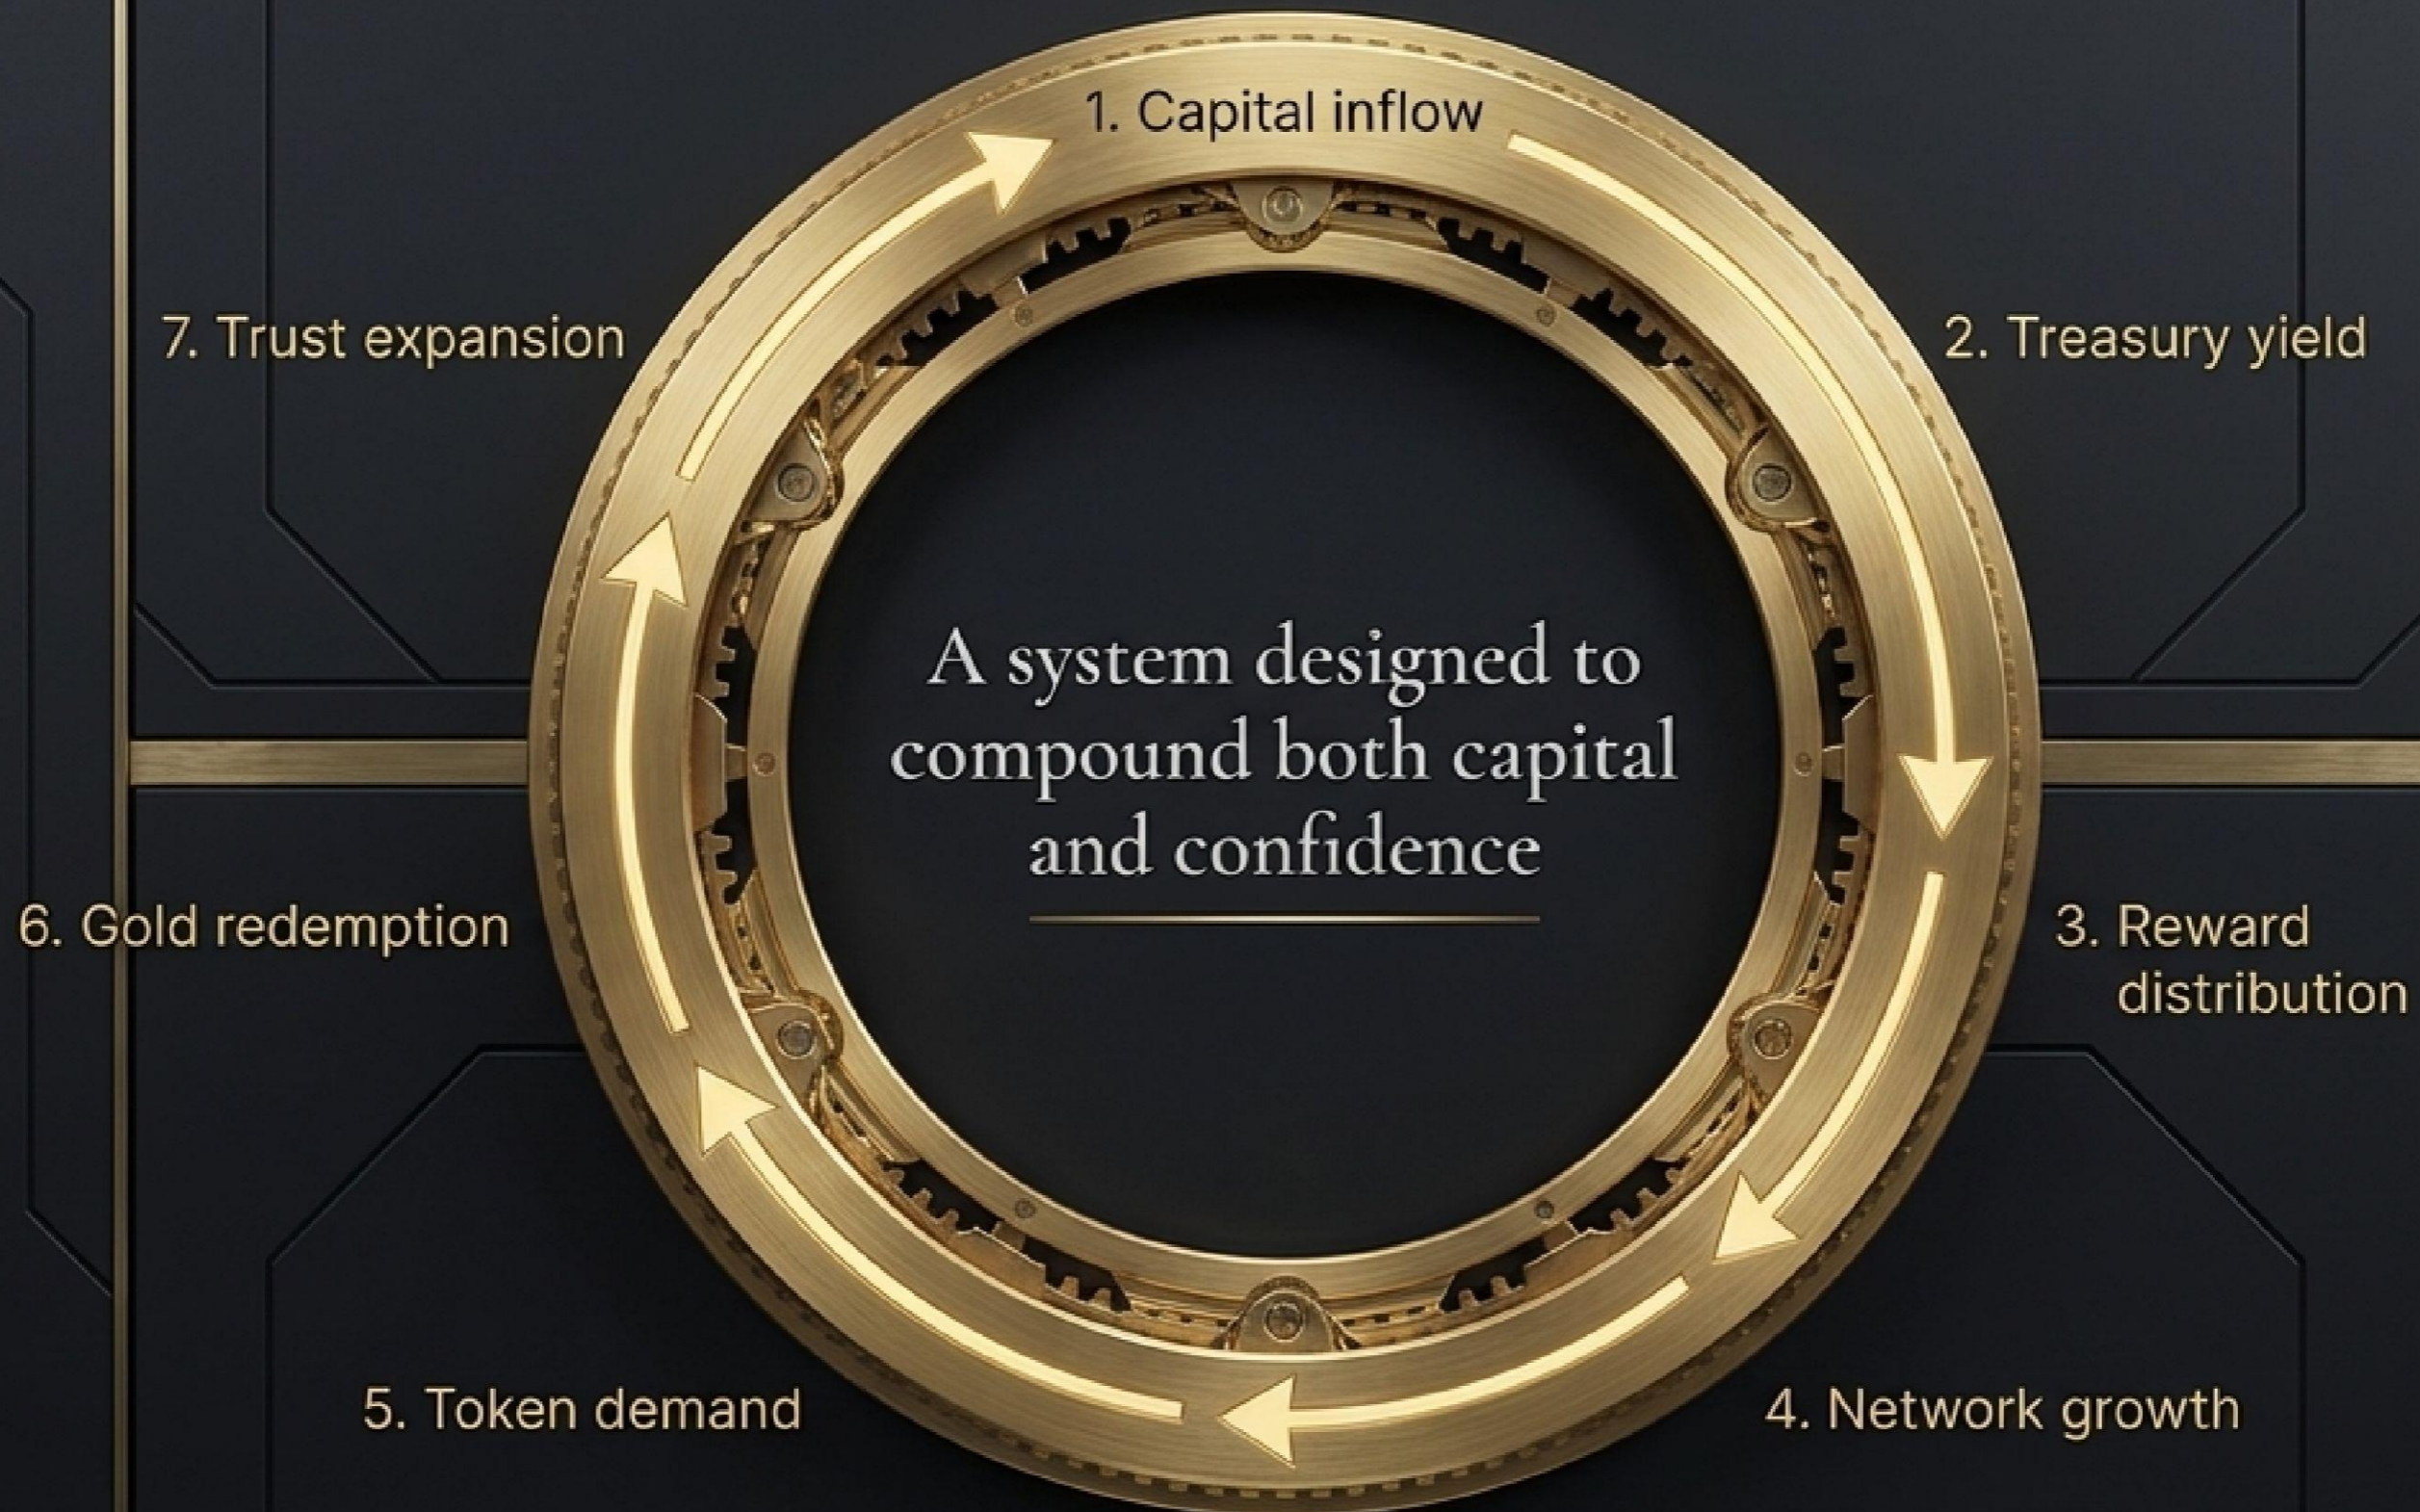

Network and settlement asset.  
Fixed supply.  
Reward, staking, and conversion utility.

# The Wealth Engine

A self-reinforcing economic loop

# The Value Waterfall

Unit economics per \$1 of staked value.

The system is designed to generate real underlying value, not just redistribute capital.

# Engineered Scarcity

## Supply Discipline

- ANX hard cap

- Reward-origin restriction

- Conversion burns supply

- Lock-up mechanisms

Scarcity is enforced,  
not assumed.

# The Multi-Layer Revenue Engine

## CURRENT ENGINE

Treasury yield on deployed capital

Gold redemption fees

ANX conversion fees

Reward claim fees

## FUTURE EXPANSION

Gold-backed financing

API and infrastructure monetization

# Return Framework

Three levels of participation driving the network.

## Leader

Organizational performance.  
Rank-based economics.

## Builder

Network-driven expansion.  
Compounding referral rewards.

## Participant

Capital-based return.  
Entry-level yield.

# Competitive Positioning

| Model          | Core Weakness        | Yield | Asset Backing | Balance Sheet |
|----------------|----------------------|-------|---------------|---------------|
| Gold Tokens    | No yield             | ✗     | ✓             | ✓             |
| DeFi           | No asset backing     | ✓     | ✗             | ✗             |
| MLM            | No balance sheet     | ✗     | ✗             | ✗             |
| <b>Auronex</b> | Structural Dominance | ✓     | ✓             | ✓             |

Auronex combines all three into one system.

# Engineered Trust & Risk Management

Token  
Volatility

Mitigated by:  
Treasury  
yield base

Network  
Growth  
Dependency

Mitigated by:  
Controlled  
emission

Operational  
Execution

Mitigated by:  
Phased  
rollout

Every reward has a path to physical gold.

# Stages of Scale

Four stages of scale

**Phase 1: Foundation**  
Staking and redemption

**Phase 2: Monetization**  
Financing and liquidity

**Phase 3: Scale**  
Institutional expansion

# The Intersection of Yield & Wealth

Auronex is not a yield product. It is a financial system designed to transform gold into a productive, distributed, and redeemable asset class.
